

Specialist Paving Cleaning and Impregnation with Hardscape

Hardscape can now offer a full range of industrial and commercial cleaning services for external cleaning areas of paving, using a wide range of CE approved cleaning equipment including mobile pressure washing and steam cleaning units which are all self contained. With the addition of the NILFISK CYCLONE ride-on pressure washer that cleans, recycles and captivates, Hardscape now have the latest and most efficient range of technology and products to get your job done quicker and more cost effectively than anyone else!

Hardscape are also committed to working to a cleaner environment... The unique range of Lanceman industrial and commercial cleaning equipment featuring an innovative recycling system which collects, filters and recycles water being used during the pressure washing and cleaning process. Plus, our mobile welfare van ensures that our operatives can travel to any site for any length of contract, working daytime or at night.

Our specialist teams carry out site cleaning services such as:

- Surface Cleaning & Impregnation
- Chewing Gum Removal
- Cladding Cleaning
- Paint Removal
- Protective Coatings
- Surface Protection and Sealants
- Car Park Cleaning
- Graffiti Removal
- Street Cleaning/Washing
- New Construction Cleaning

In addition we can offer other services such as:

Brickwork Cleaning Floor Cleaning . Fire/Flood Damage . High Level Cleaning & Maintenance . Industrial Painting & Spraying
 Masonry Restoration Cleaning . Plant & Machinery Cleaning . Warehouse & Factory Deep Cleaning . Specialist Blasting Services
 Cyclone Cleaning

In partnership with:

0845 260 1748

Services

New Construction

Initial deep clean following construction, this would include the removal of excess grout, tyre marks, oil stains and other spillages created during the build.

Rates can vary based on the level of the cleaning required, this would be verified by a site survey. Please contact us for a quotation.

Impregnating

The deep cleansing of the paving is essential prior to the paving being impregnated, we would always advise if the client is not sure about this process then a trial area be carried out with a presentation on what to expect of the product, trial areas can be carried out for a nominal charge (please ask for details) depending on the size of the contract, this would be credited off the final price if we were to be awarded the contract.

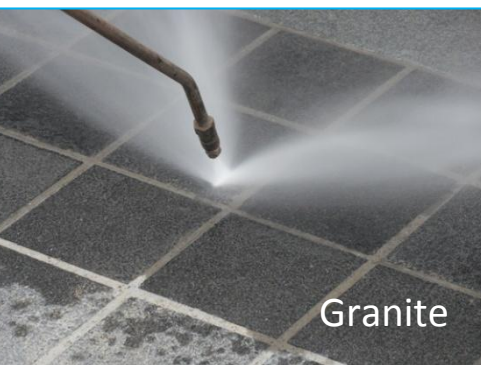

The rates for impregnating vary on the porosity of the stone/paving this would verify on the survey. Please contact us for a written quotation.

Maintenance Cleansing, Training and Consultancy

This really is dependent on the level of the cleaning being carried out by the Authority or owner following the hand over, we would advise that this service is reviewed prior to even committing to purchasing an impregnator or even deciding on what materials are used in the construction.

We can offer a full review of your client's current service and provide detailed advice in a written report of changes and training that would be required. Please contact us for a written quotation.

We would also advise following the handover that they receive a 1 day training course for up to 5 cleaning operative/supervisors on maintaining the impregnated stone paving, this would be inclusive machine settings, day to day requirements, gum removal and spillage response all carried out on-site.

Our rates for maintenance cleans can vary based on the above. Rates for sites below 800 metres square would likely fall into the day/night rate dependent on the equipment and operatives required.
